## THE COGNITIVE CODER

By [Armand Ruiz](#), Contributor, InfoWorld | SEP 26, 2017 7:22 AM PDT

### The 80/20 data science dilemma

Most data scientists spend only 20 percent of their time on actual data analysis and 80 percent of their time finding, cleaning, and reorganizing huge amounts of data, which is an inefficient data strategy

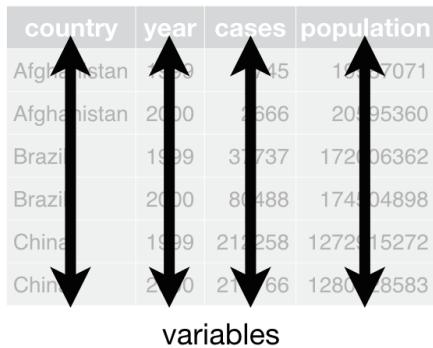

## Reshaping Data (tidying your data)

How to reshape your data in order to make the analysis easier.

# Tidy Data

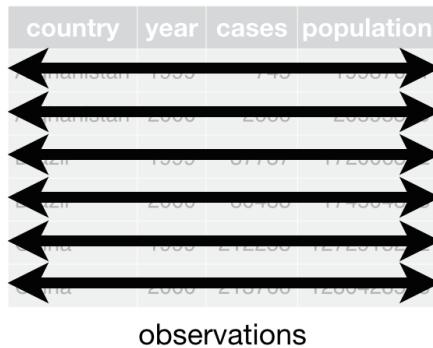

country	year	cases	population
Afghanistan	1999	745	198071
Afghanistan	2000	2666	2059360
Brazil	1999	37737	172006362
Brazil	2000	80488	174504898
China	1999	212258	1272915272
China	2000	213766	1280420583

variables

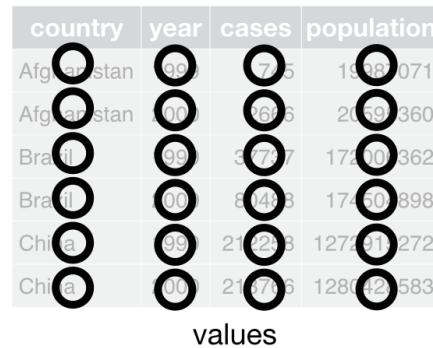

country	year	cases	population
Afghanistan	1999	745	198071
Afghanistan	2000	2666	2059360
Brazil	1999	37737	172006362
Brazil	2000	80488	174504898
China	1999	212258	1272915272
China	2000	213766	1280420583

observations

country	year	cases	population
Afghanistan	1999	745	198071
Afghanistan	2000	2666	2059360
Brazil	1999	37737	172006362
Brazil	2000	80488	174504898
China	1999	212258	1272915272
China	2000	213766	1280420583

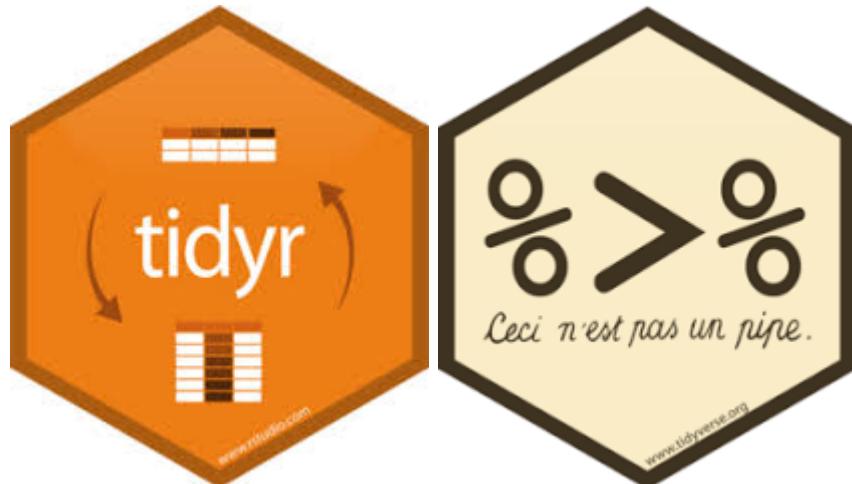

values

- Each variable is saved in its column.
- Each observation is saved in its own row.

# packages

```
library(tidyverse) #or library(tidyr)  
library(magrittr)
```

# tidy package

Hadley Wickham, Chief Scientist at RStudio explaining tidy at WOMBAT organized by Monash University, Australia.

# tidyr verbs

## Main verbs

- `pivot_longer`

In `tidyr` (2014) `gather`

- `pivot_wider`

In `tidyr` (2014) `spread`

## Other

- `separate`
- `unite`

## Input and Output

Main input: `data frame` or `tibble`.

Output: `tibble`

pivot\_longer

# pivot\_longer()

- Turns columns into rows.
- From wide format to long format.
